<b>Target version:</b>			
<b>Resolution:</b>			
<b>Description</b> <p>When viewing a list of tickets that are grouped by some field, it would be very useful to be able to drag-and-drop the tickets between the groups and have that field of the ticket update.</p> <p>This would go some way toward providing a simple set of tools to support Agile processes, such as a task/scrum board. For example, at a regular (daily) catch-up meeting, it would be easy to group issues (Tasks or User Stories for example) the status and to update the status quickly and visibly. Another example would be managing priorities.</p> <p>Nice to have: options to prevent drag-and-drop updates from generating emails</p> <p>Relates to <a href="#">#8016</a></p>

Great idea! It would be very useful for planning purposes.
