Category:	Plugin Request	Estimated time:	0.00 hour
Target version:			
Resolution:	Wont fix		
Description I have a multiple projects in Redmine. Now i need to add a doxygen documentation for each project. Each project has it own documentation in git repository. And i can't set the path to documentation only with {PROJECT} variable . Is it possible to add 'PluginEmbedded settings' tab with 'HTML path' for each project (My_project->Settings->PluginEmbedded settings) ?

But

Embedded plugin

Embedded is a plugin which lets you embed HTML files (eg. auto generated documentation, test reports) in your projects.

Author: Jean-Philippe Lang
Latest release: 0.0.1, 2009-02-22
Compatible with: Redmine 0.8.x & Redmine Trunk
Public SCM: <http://www.redmine.org/projects/redmine/repository/browse/plugins/embedded>
Public ITS: <http://www.redmine.org/projects/redmine/issues>

Public ITS is this tracker, isn't it ?

#3 - 2011-09-16 11:10 - Etienne Massip

- Category set to Plugin Request
- Assignee set to Jean-Philippe Lang

Well, you're right, I didn't know about that.

Even if the plugin list is obsolete, this plugin is not in the plugin directory, so I'll let Jean-Philippe rule on this since he is the author.

- Status changed from Reopened to Closed
- Resolution changed from Invalid to Wont fix

Embedded plugin was removed from SVN by [r9562](#) due to not porting rails3.
