

## Redmine - Feature #926

### user picture (as in the TYPO3 version)?

2008-03-25 15:14 - Kai Olav Fredriksen

<b>Status:</b>	New	<b>Start date:</b>	2008-03-25

<b>Category:</b>	Accounts / authentication	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>			
<b>Resolution:</b>			
<b>Description</b> file this under 'neat', not 'crucial'.  but, i kinda think it would be, yes, neat, to associate a picture with a user. like they do it at <a href="#">TYPO3 Forge</a>

I support this.

I know gravatar support ([#1776](#)) is now merged, but not everybody is comfortable to give his email to a .com.  
I would imagine it this way:

- the user can set a picture for himself in /my/account
- when needed (same places as gravatar support), use this image.

The image would have priority on the gravatar of course.

I see no need for a new system configuration option for this.

I don't like setting up avatars on an external site. And I think for many commercial applications a picture stored on the redmine server is a much better choice.

It took some time to figure out what is gravatar. It starts here <http://en.gravatar.com/>. Both ideas are good. But I like the idea to store user's picture inside the redmine application
