Resolution:			

Description

on render_tabs helper, label, which is translated on view, don't accept translation arguments. A simple change on view allows to do this:

```
<%= render_tabs [  
  { :name=>'issued', :partial=>'issued_invoices', :label=>:issued },  
  { :name=>'received', :partial=>'received_invoices', :label=>[:received, { :num=>"3" }] }  
] %>
```
