

Redmine - Feature #9330

Watchers can not see the ticket status, if their role is set to only own or assigned tickets.

- Assignee set to Mischa The Evil

Hi,

this is not a feature requested but obviously a fault in design! If a watcher is assigned to a ticket in a project as a watcher and not the assignee himself and the role of the watcher selected is only able to see assigned tickets to him or self opened issues, he will never be able to see the ticket were he

was added as a watcher.

So we have to give his role the rights to see ALL the Issues in that project instead of just his own created and assigned to tickets.

i think the objective is clear? Redmine is the newest version:

Redmine 1.2.1

MySQL Database

Ruby 1.8.7

Gems 1.6.2

#6 - 2011-10-04 11:38 - Holger Baumhaus

We have also encountered this issue and I would agree that it is not a feature request.

The way to reproduce:

- create a new user, e.g. Bob, with *issues visibility* (in *Roles & Permissions*) to *Issues created or assigned to the user*
- create a new ticket that is not assigned to any user
- resulting ticket will not be viewable by the user Bob
- it is not possible to add Bob as a *watcher* to the ticket

However, if Bob had at some point permission to view the tickets and has been added as a watcher to the ticket, after the permissions change he won't be able to see the ticket.

- change permission to view all tickets
- add Bob as *watcher* to the ticket
- switch Bob back to *Issues created or assigned to the user*
- ticket will not be viewable by Bob

#7 - 2011-10-10 02:30 - Mischa The Evil

Francesco, Holger,

Thanks for your responses. I've done some research for this issue afterwards and I think it is more complicated. I'll try to explain based on the reproduction-steps provided by Holger.

However, if Bob had at some point permission to view the tickets and has been added as a watcher to the ticket, after the permissions change he won't be able to see the ticket.

- *change permission to view all tickets*
- *add Bob as watcher to the ticket*
- *switch Bob back to Issues created or assigned to the user*
- *ticket will not be viewable by Bob*

This is actually the expected behaviour due to the fact that the watcher-mechanism is not used as part of the permissions-system. The watcher-mechanism is specifically designed as a email-notification system for multiple objects (such as issues, wikipages, messages etc.), not as a system to be used within the scope of the permissions system. This is already stated by Jean-Philippe in issue #7412-[#note-13](#).

Looking at the feedback on this issue it seems to me that this issue describes the behaviour as proposed by Vladimir Dzalbo in issue #7412-[#note-3](#). That proposition has finally emerged into issue #8488.

Considering the above I'd propose to close this issue in favor of issue #8488. Any thoughts?

Thank you.

Issue #8448 sounds promising and would also solve some problems beyond adding watchers.

Thanks for the feedback. Closed as 'duplicate' accordingly.

#11 - 2016-06-07 11:07 - Tobias Fischer

I can confirm the patch private_issue_watchers_3.1.x.diff in #8488 solves this issue.
