

Redmine - Patch #9359

invert project <-> repository relationship

2011-09-30 16:05 - Jens Krämer

Status:	New	Start date:	2011-09-30
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:			
Description <p>This patch changes the relationship between repositories and projects, so that a single repository can be shared among multiple projects.</p> <p>While you can already use the same physical repository with multiple projects without this patch, doing so leads to duplication of change records in the database as well as multiple identical changeset references on issues, because each changeset is imported n times, where n is the number of projects referencing the repository.</p> <p>The patch changes Redmine's behavior to re-use an already existing repository record if possible, when the scm properties of a project are configured. A migration converting existing installations that use one ore more repositories in multiple projects to the new setup is included.</p>

- File invert_project_repository_relationship_2-1.3-stable-9308.patch added

Thank you Jens,

I have found this patch invaluable and have updated the patch against redmine-1.3-stable r9308 for convenience.

...Robert

#6 - 2012-04-07 19:18 -

 Feature #779: Multiple SCM per project

#7 - 2012-04-08 02:03 - Jens Krämer

I don't understand your comment ;-)

however this patch is **not** about multiple SCM per project but about multiple projects per SCM - so you can reference the same repository in multiple projects, i.e. one for development and one for exception tracking via the hoptoad_notifier-plugin.

#8 - 2012-04-08 02:04 - Jens Krämer

[Robert Lemke](#) - very appreciated - think I'll need to upgrade that Redmine setup to 1.3 or even 1.4 soon...

#9 - 2013-01-16 16:35 - Roman Lukmanov

Hi!

I've applied this patch (invert_project_repository_relationship_2-1.3-stable-9308.patch) and get the 500 error.
In log:

```
[redmine log]# tail -15 production.log
EnabledModule Load (0.1ms)    SELECT name FROM `enabled_modules` WHERE (`enabled_modules`.project_id = 76)
Project Load (0.0ms)    Mysql::Error: Unknown column 'projects.repository_id' in 'where clause': SELECT `proj
ects`.id FROM `projects` WHERE (`projects`.id = 76) AND (`projects`.repository_id = NULL) LIMIT 1

ActiveRecord::StatementInvalid (Mysql::Error: Unknown column 'projects.repository_id' in 'where clause': SELEC
T `projects`.id FROM `projects` WHERE (`projects`.id = 76) AND (`projects`.repository_id = NULL) LIMIT 1):
app/controllers/repositories_controller.rb:41:in `edit'

```

Redmine version is 1.3.2

#10 - 2013-02-10 06:03 - Charles Sporkman

Anyone taken a stab at getting this working under 2.2.x yet?

#11 - 2013-08-22 16:24 - Robert Rath

Hi Roman,

Did you apply the patch against checked out Redmine 1.3 svn revision 9308? If your checked out source is too far away from this revision I can not predict the behavior. Better to study the patch and manually patch if not a direct match.

#12 - 2013-08-22 16:28 - Robert Rath

Greetings All,

I have just evaluated latest Redmine 2.3 stable and the old implementation has not changed. I might just take a shot at re-creating the patch. I am a little concerned about the added complexity of multiple SCM support per project.

Hi Chris,
Thinking about having a go on the current 2.3 stable build unless you have already done it. ;-)
... Robert

#14 - 2013-08-27 08:27 - Robert Rath

My initial simple attempt at creating a Redmine 2.3 patch using Jens original code highlights the new complexity added by Redmine's recently added new multiple SCM per project capability. My up-ported patch simply patches the original code but does not correctly integrate into the new Redmine functionality

For my application I can live with the current 2.3 SCM structure however I still hate the fact that adding the same SCM to a new project takes a long time for large repositories to unnecessarily build the change-set over again.

I may still tackle this properly in the future if I really need it. In the mean time if anyone wants my non-functional 2.3 patch to play with then please ask.

... Robert Rath

+1
this patch greatly improves the user experience

#16 - 2024-11-13 18:29 - pasquale [:dedalus]

- File clipboard-202411131829-p46jl.png added

In addition to the issue of performance and redundancy at the database level, from a UX point of view, this problem means that, if the same assembly is shared among N projects, we will have N rows of the same changeset shown in activities page. This is confusing when managing many projects and repositories.
