Target version:		Affected version:	
Resolution:	Invalid		
Description			
<p>Hi, I'm using SQL Developer in my work. After installing SQL Developer and starting it, I need to add the path to where java.exe is. After entering the path I get an error message:</p> <p>"Cannot find a J2SE SDK installed at path C:\Program Files\Java\jre6".</p> <p>What extra does I have to install to be able to work?</p> <p>Please get back to me as soon as possible.</p> <p>Thanks, //Anette Bohlin</p>

Sorry for the headline..

I did try to install Java JDK Package, but after that there is a box showing up all the time when I'm in the web-browser, asking me if Java is allowed to run something. Since I don't have any admin authority on my computer I always have to answer No.. but that box shows up ALL the time, using explorer as web-browser.

I'll try to un install the java JDK Package and see if that will help...

Uninstalling didn't help, the box pop's up all the time in Explorer anyway...

- Status changed from New to Closed

- Resolution set to Invalid

Not the right tracker, this one is for Redmine code bugs and feature requests.

- Status changed from Closed to Reopened

Ok.. I'm a new user of Redmine.. and.. if I put this on the wrong group.. why can't you then move it to the correct one instead of just closing it?

You don't get it : Redmine is not a Java application, you're in the wrong place, I guess you're looking to some site using Redmine as its ITS, not to Redmine ITS itself.
