

Redmine - Defect #9394

Custom date field only validating on regex and not a valid date

2011-10-09 00:41 - Chris Malek

Status:	Closed	Start date:	2011-10-09
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Custom fields	Estimated time:	0.00 hour
Target version:	1.2.3	Affected version:	1.2.2
Resolution:	Fixed		

Description

If you create a custom date field it looks like the validations are not correctly happening based on a valid date. It is only validating on this regex `^\d{4}-\d{2}-\d{2}$`

So 2011-10-33 is a valid value but October does not have 33 days.

The offending code is in Redmine/apps/models/custom_value.rb

In the Validate method

I added the following to the end of the date validation `&& begin; value.to_date; rescue; false end`

I only use git so I can't submit this as an svn patch.

Here is my modified code with the only changing being in the "when 'date'"

```
def validate
  if value.blank?
    errors.add(:value, :blank) if custom_field.is_required? and value.blank?
  else
    errors.add(:value, :invalid) unless custom_field.regexp.blank? or value =~ Regexp.new(custom_field.regexp)
    errors.add(:value, :too_short, :count => custom_field.min_length) if custom_field.min_length > 0 and value.length < custom_field.min_length
    errors.add(:value, :too_long, :count => custom_field.max_length) if custom_field.max_length > 0 and value.length > custom_field.max_length

    # Format specific validations
    case custom_field.field_format
    when 'int'
      errors.add(:value, :not_a_number) unless value =~ /^[+-]?\d+$/i
    when 'float'
      begin; Kernel.Float(value); rescue; errors.add(:value, :invalid) end
    when 'date'
      errors.add(:value, :not_a_date) unless value =~ /^\d{4}-\d{2}-\d{2}$/i && begin; value.to_date; rescue; false end
    when 'list'
      errors.add(:value, :inclusion) unless custom_field.possible_values.include?(value)
    end
    end
  end
end
```

My Environment Info

Redmine 1.0.4.stable (MySQL)

Running using the latest Bitnami windows installer
