**Description**

If a user is connected to a Role which has Issues visibility "All non private issues" and does not belong to a group the following issues are visibly:

- \*All non private issues
- \*Private issues assign to the user
- \*Private issues added by the user

But if a user is added to a group, only non private issues and private issues added by the user are visibly. Private issues assign to the user and private issues assign to a group which the user is a member off are not shown.
