Description

Hello @redmine-team,

I started evaluation off redmine. I'm very impressed. It seem's to be very usefull for our work.
We are very familar with Oracle-RDMBS.

Oracle is currently not supported, but SQL-Scripts are included in installation.
Some problems are related to rails Framework and not to redmine.

Are there any plans to support Oracle-RDMBS?

Best regards

Mario Haupt

Not a defect. There's forum for this kind of discussions. Oracle is working, but not officially supported as we don't have enough people testing with Oracle.

I have upgraded from 1.2.0 to 1.4.4 succesfully. Someone want the patch? It works with my current Oracle installation.
