Description

Hi,

I'm running a working version of redmine on a server.

I've just rent a new server and want to migrate my redmine from old to new server. All is the same (except hardware).

On the new server, redmine work fine, and i can see all my public projects, BUT when i want to login or register or forgot password, on submitting forms, i've got an error 500 from apache.

The query in search box work fine.

There is NOTHING in logs (apache error or acces or redmine logs).

I'm running redmine 1.1.2 thru apache+passenger. I've tried to update to 1.2.x but it's the same.

here is my conf

- Status changed from New to Resolved

I've found a solution.

I've rebuild apache without IPv6 and all works now. Dunno why, but now it's working fine.
