Description

Hello

we have the follow problem:
we create a subtask and from this subtask an other subtaks and now we will delete the last subtask.

Here we get this error:

This looks like it's an plugin issue. Can you see if you can reproduce it without any plugins running? If not you should narrow it down to one plugin (or worse: interference issues between 1+ plugins and core) by enabling them one by one and report the issue to the plugin author afterwards.
