Description			
<p>Working on a custom implementation of RedMine, we found that if the user tries to change the tracker of a issue but do not save the modifications after all, custom values that belongs to the old tracker, but not to the new one, are removed. No history neither.</p> <p>How to reproduce it:</p> <ol style="list-style-type: none">1. create tracker 1 with custom field A2. create tracker 2 with custom field B3. create an issue with tracker 1, assign a value to custom field A4. edit the issue5. change tracker to tracker 26. DO NOT SAVE and refresh the page custom field A is empty <p>The attached patch worked for us, it needs some testing though I'm testing in redmine-1.1.1 but the code looks the same in newer versions</p>
