

Redmine - Defect #9752

"Subtasks autocompletion" feature breaks "Add related issue" scenario

2011-12-08 08:12 - Max Khon

Status:	Closed	Start date:	
Priority:	High	Due date:	
Assignee:		% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:		Affected version:	1.1.2
Resolution:	Invalid		
Description			
The browser asks for HTTP basic auth with the following text: "The server XXX:443 requires a username and password. The server says: Redmine API." every time when user tries to add a related issue.			
In our case redmine runs under Apache (mod_passenger) on SSL port if that can be related.

History

#1 - 2011-12-08 20:14 - Jean-Philippe Lang

Hint [here](#).

#2 - 2011-12-09 05:16 - Max Khon

I copied Ajax.Responders.register() from trunk (that does CSRF token copy) but the problem still persists (I made sure that my browser sees new Ajax.Responders.register() version).

#3 - 2012-02-24 10:38 - Carsten Schurig

I just can say we have this problem sometimes two, but not on entry of related issues. It "just happens" sometimes and I couldn't determine when, yet. I assume a plugin is the culprit...

BTW we are running 1.3.1

#4 - 2012-02-24 17:39 - Etienne Massip

Can also be due to outdated application.js on client?

#5 - 2012-05-09 16:15 - Anonymous

I have the same problem here, too. While moving tickets over the Kanban board, my browser asks me for a new authentication for the context "Redmine API".

I've replaced the application.js with the new one mentioned by Jean-Philippe Lang in [#9749](#), but no difference. A diff shows to me, that my existing application.js had already the CSRF token copy part included.

thor (0.14.6)
tilt (1.3.3)
treetop (1.4.10)
tzinfo (0.3.33)

```

Can anyone can give me a hint where to search for the real problem? I've never written Ruby code before, so please give me a few hints or say which additional information I should provide to you.

Might be an issue with the used kanban plugin.

#7 - 2012-05-18 15:16 - Gary Pinkham

having the same issue with the Kanban plugin. I have used other plugins with drag and drop like Redmine Backlogs and never had the issue so assuming it's the Kanban plugin..

#8 - 2012-05-18 15:31 - Gary Pinkham

fyi.. discovered this discussion over at the kanban plugin projects page.. applied the last fix mentioned and it works for me now..

Link is no longer available.

#10 - 2013-05-28 16:04 - Toshi MARUYAMA

- *Status changed from New to Closed*

- *Resolution set to Invalid*

It seems this issue is caused by kanban plugin.
