Category:	Issues permissions		**Estimated time:**	0.00 hour
Target version:				
Resolution:			**Affected version:**	1.3.0

Description

Hi, in 1.3.0, we realize that "private issue" has a different behavior.

When I put an issue as "private" on a public project, that issue can only be accessed by myself. I mean, I have coordinator privileges, I change public/private to issue and then a developer can't see that issue.

I had checked permissions at "Administration" and searched all issues here in Redmine's site without luck.

Is it a new behavior or is a bug?

Information about my environment:

```
mysql  Ver 14.14 Distrib 5.1.41
--
Ruby version              1.8.7 (x86_64-linux)
RubyGems version          1.3.7
Rack version              1.1.2
Rails version             2.3.14
Database schema version   20110902000000
--
Redmine 1.3.0.stable.8325
```

thanks !
(apologies about my english)
